Proto Labs Launches New Global Website

January 30, 2014

MAPLE PLAIN, Minn.--(BUSINESS WIRE)--Jan. 30, 2014-- Proto Labs, Inc. (NYSE:PRLB), a leading online and technology-enabled quick-turn manufacturer, announced today that a completely redesigned website has been launched globally in the United States, Europe and Japan. It continues to serve all content in seven languages: English (US and UK), French, Italian, Spanish, German and Japanese.

The new protolabs.com site now features the Firstcut CNC Machining and Protomold Injection Molding services under one digital roof with an architecture that allows users to easily find the information they need and quickly upload part designs for quotes. With both services united online, navigation has been simplified: Customers can log in to their [Account](#) from one location, and can [upload a 3D CAD model](#) to get an interactive quote from virtually anywhere on the site.

The new resources page aggregates all of the design tools and guidelines, for both services, into one spot. Users can now search for everything from materials to size capabilities to rules for draft as well as find industry case studies and quick-reference machining and molding pricing samples. Additionally, there is more access to technical white papers and video tours and images of the various Proto Labs facilities.

About Proto Labs, Inc.

Proto Labs is the world's fastest manufacturer of custom prototype and low- to mid-volume production parts for product developers globally – Real Parts, Really Fast™ Proto Labs utilizes computer numerical control (CNC) machining and injection molding to manufacture custom metal and plastic parts for its customers. For more information, visit protolabs.com.
